Vitamins to VEGA!

4th. Jan. 2024

VITAMIN

01

Vitamin B12: 1% feed grade, some manufacturers have raised their quotations to 14 usd/kg, but because the existing market stock is still large, it has not been able to effectively increase the overall transaction price. As the existing inventory continues to be consumed, we will pay close attention to whether low-end manufacturers will increase their quotations in the future.

AMINO ACID

02

Isoleucine: The domestic market price is about 4.8 usd/kg. The recent market transactions have been relatively weak, and the number of inquiries has decreased. End users purchase on demand. The factory mainly focuses on delivery. We will pay attention to the factory's order receipt in the future.

API

03

Puli Pharmaceutical announced that the company recently received the marketing authorization for voriconazole dry suspension issued by the U.S. Food and Drug Administration (FDA). This product is a broad-spectrum triazole antifungal drug, suitable for the treatment of the following fungal infections in adults and children aged 2 years and above: Invasive aspergillosis, non-neutropenic candidiasis, and other deep tissue Candida infections.

FOOD ADDITIVE

04

Recently, due to market conditions, the quotations of mainstream L-carnitine manufacturers have stabilized at around 20-21 usd/kg. It is expected that there will still be an upward trend in the future, and we will continue to pay attention to the market conditions.
