Vitamins to VEGA!

08th. Jan. 2024

## VITAMIN

01

ZMC production maintenance plan: It is reported that ZMC began production maintenance in early February, the expected cycle is about 6 weeks.

January 5, VE quote USD8.6/KG.

## AMINO ACID

02

This week, the market price of lysine and threonine decreased slightly. The external quotation of Lysalt export factory was between USD1.23-1.25/KG.

The price of methionine was stable, but the market inquiries were general. The user's replenishment sentiment is weak, but the market is tight in spot, the factory is mainly executing the old contract, and the market is expected to be temporarily stable in the later stage.

## API

03

This week, the overall trend of veterinary drug raw materials to maintain weak and stable operation, market demand is general, sufficient supply, customers are still mainly to just need to purchase. The delivery time of some factories of Flufenicol is relatively tight, which has been scheduled to February, and the price is about USD26.5

## FOOD ADDITIVE

04

This week, the overall trend of food additions was stable. The price of sweetener series products, sucralose/aspartame/Acesulhoney remained stable. L-carnitine series product prices remain stable and this week is expected to subsequent prices will be pulled up; Preservative products sodium benzoate/potassium sorbate series products due to market demand affect the price to remain stable.
