VITAMIN

01

Vitamin B12: The current mainstream factories have increased prices, the highest price of 1% feed grade was quoted to USD15/KG, and cyanocobalamin pure product USD1500/KG.

After a long period of weak price bottom operation, the factories are willing to raise prices, but most of the market is still in a wait-and-see state, and the market reaction and customer acceptance still need time.

AMINO ACID

02

According to market statistics, the total sales volume of 9 listed pig enterprises in 2023 has exceeded 120 million head, of which the total sales volume in December was 12.471,000 head. It is worth mentioning that Muyuan shares, Wen's shares, Dabinong and Tang Renshen exceeded the target of 2023.

API

03

Florfenicol, affected by the price of raw materials in the early stage, the price has rebounded slightly, but affected by market demand, the recent price has fallen.

The current factory price is at USD26.2/KG, and the delivery date of some factories has reached Feb. It is expected to maintain weak and stable operation in the later stage.

FOOD ADDITIVE

04

Affected by market demand, the price of potassium sorbate has stabilized, and the transaction price in foreign markets is about USD2.5-2.6/KG. The possibility of subsequent price declines is small, and we will continue to pay attention to the market.
