Vitamins to VEGA!

9th. Dec. 2024

VITAMIN

01

Last week, the vitamin market was stable. Folic acid manufacturers still stop offering, some trader has sold some stock, prices are high place; VB6 mainstream factories stopped offering, may getting higher. In addition, with the increase of foreign pre-Christmas purchases, the domestic market users end of the year stocking up, the recent week D3 turnover increased significantly, the factory and basically to stop reporting, the market inventory continues to be consumed to reduce; China's export FOB transaction price of \$ 32-35, the mainstream factories in the domestic and export is basically to stop offering; D3 market price is expected to In December there will be a leaping upward trend, may be a new high.

AMINO ACID

02

Last week, 98% lysine market factory external offer firm, the market spot tension, the factory more delivery-based, 70% lysine market stability; Threonine: prices are at a high level and stable, end-users signing cautious, mostly wait-and-see; Methionine: factory offer strong, but the overall demand for the general, the market trend of steady strong, need to keep pay attention to the status.

API

03

Last week, the overall market of veterinary raw materials ran smoothly. The market price of the products such as doxycycline, florfenicol, oxytetracycline hydrochloride and so on was stable for the time being, but the spot was less and the supply was still tight. In addition, tilmicosin phosphate still maintains strong trend and high market concern. Later on, we will continue to pay attention to the market changes..

FOOD ADDITIVE

04

Last week, the price of sucralose/ acesulfame/aspartame, on the other hand, remained stable with normal shipments. Creatine monohydrate was driven by market sentiment, the current transaction price was at 3.85usd/kg, but the delivery schedule was lined up until late December. The price of L-carnitine series was stable. Prices of preservative products are stable, and the delivery status of each manufacturer is normal.
